

Comprehensive MRP System for
Subcontract Manufacturing

Tricorn: Enterprise

As your business grows, you gain new customers, new suppliers and more staff to manage. Stringent regulations and new customer specifications can put increasing pressure on your business to reduce prices yet expect faster delivery times and better customer services. To adapt and thrive amongst the mounting paperwork and compliance requirements in your production process, you need to reduce inefficiencies and streamline operations by managing your whole manufacturing process from one system.

A Comprehensive MRP System for Subcontract Manufacturing

Tricorn: Enterprise is a manufacturing MRP system that is developed for your unique requirements, by a team that understands the paperwork, capacity planning, and customer visibility challenges facing subcontract manufacturers.

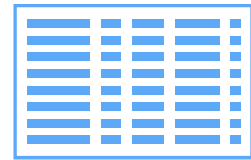

Tricorn: Enterprise allows you to process even highly complex jobs. This is possible using a number of features that don't interrupt your existing schedule.

Capacity Planning

Real-time Costing

Bill of Materials

Live WIP Tracking

ISO & IATF Traceability

Tooling Control

"Improved efficiency of Production Engineering Processes by 40%"

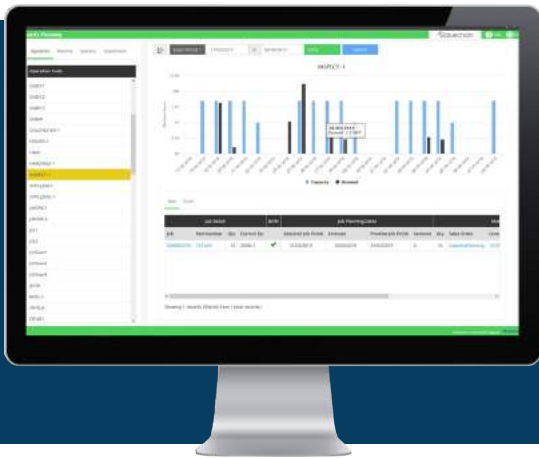

"Everything is integrated now. We have the shop floor data capture and document management included, so everything is on one system. We've improved efficiency of production engineering processes by 40%, and have now generated new saleable capacity, without increasing our costs."

Features

Sales Engineering

Streamline paperwork to quickly turn prospects into sales. Easily log, complete and send your quotes, track their conversion rates, and use them as a starting point for entering incoming sales orders. Improve customer communication and confidence.

Production Planning

Identify production bottlenecks and improve job visibility to improve the flow of work through the factory. Analyse current capacity availability using SFDC and jobs-in-production data. Provide customers with realistic promise dates and ensure delivery is on time.

Purchasing Control

Easily produce purchase orders, GIN labels and delivery notes to track what's coming in and going out. Ensure all materials are flagged to be ordered and delivered in time for the appropriate operation whilst controlling stock levels and maintaining traceability.

Quality

Control all your internal, customer and supplier rejects within one solution. Provide complete traceability for ISO9001 and IATF compliance and customer satisfaction. Manage supplier compliance to ensure your supply chain is up to scratch.

Finance

Ensure customers are invoiced accurately & promptly to maximise cashflow. Reduce financial risk to your business by stopping jobs commencing or deliveries being despatched for customers who have reached their credit limit.

"The system has enabled us to grow by over 20% over the past 12 months without increasing our support staff. With the help of the team, we are confident of sustaining our controlled growth and continually improving our competitiveness."

PRECISION LASER CUTTING

Sales Order Processing

Ensure contract reviews are complete up-front to reduce risk to your business. Build your library of industry & material specs, parts & routes to allow streamlined entry of sales orders. Improve job visibility to improve customer confidence.

Production

Part issue & drawing issue control ensure you are always working to the latest customer specifications. Ensure that your shop floor have access to all the required information at the relevant time, ensuring the highest quality product.

Shop Floor Data Collection

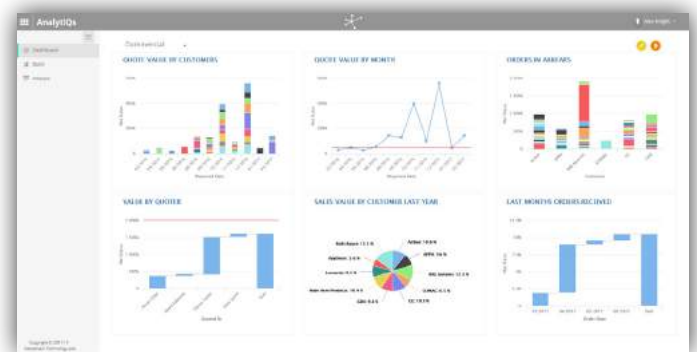

Accurately measure how long a process takes, and how much it costs, providing accurate job costing. Employees can capture rejects, lost time & machine breakdowns through the SFDC interface, without having to leave the shopfloor.

Human Resources

Monitor time & attendance to track hours worked, and identify employees working overtime or coming in late to make employment decisions. Identify the key skills required for each operation and match your employees' skill levels against requirements.

Reporting

Streamline reporting by scheduling KPIs and key reports to run at designated dates & times. Increase company transparency and collaboration by sharing reports via email with your colleagues and external contacts.
