PRODUCTION

Production Control Software for Manufacturing SMEs

valuechain
company

Tricorn: Production is developed in the UK and is the result of many years experience in dealing with the needs of small, medium and large manufacturing businesses. We have designed and continually develop our Job Processing software to be user-friendly, easy to learn, and to give the flexibility needed to manage operations from quotations through to invoicing, enabling you to meet quality, cost, efficiency and delivery targets.
Integrated modules provide both management and operational tools and are especially suited to sub-contract, KOP, Kan-Ban, made-for-stock products and 'make to order' manufacturing, including assemblies. The comprehensive report generation and search capabilities enable you to continually evaluate performance and improve the efficiency of the total manufacturing process through variance analysis and improved control of lead times, inventory and work in progress.

Estimating & Quoting

Job costing estimates can be prepared in detail by including materials, parts and sub-components. By providing mark-up percentages for each stage of the build process, you can accurately view how much you should quote. Quotes can cover single items, multiple items or quantities, assemblies or kits of parts in any combination.

Stock Control

Tricorn: Production enables you to record the raw materials and components used, together with costs, specifications, locations, quantities in stock and quarantined. 'Stock lists' with valuations can be printed showing the amount of parts in stock and all associated information (works order, traceability, etc.)

Production

Works orders can be created from successful quotes, previous works orders or parts templates. Job Cards can be printed to your specification and can include key information.

Manage multiple delivery batches and consignment stock as well as build-for-stock work orders. Time recording can be achieved via barcode scanners, touch-screens or direct input. You can compare the actual time and cost with the estimated.

"Tricorn increased our Turnover by 50%"

"Tricorn: Production has made us quicker and more efficient and I am really impressed with the traceability of all the data. It has helped us to grow - we could never have increased our turnover by 50% since the system was installed without the help of Tricorn. I should have done it sooner!"

- Loftlock Precision Engineering Ltd

"Excellent Installation and Go-Live Process"

"The installation period was very well managed and delivered to an extremely high standard. The training of our team was very professional and the "Go-Live" process was eased by the incredibly helpful and supportive approach from the Tricorn team who were always there to guide us and answer any questions that we had, no matter how small."

- Metspin

Purchase Orders

PO's can be raised for works orders or stock for the purchase of materials, parts, subcontract and tooling. Goods Inwards can record deliveries against purchase orders with full materials traceability being recorded and print delivery labels. Certificates of Conformity documents can be attached as links to materials booked in or sub-contract items returned after treatment.

Invoicing

Seamlessly produce invoices from delivered batches without needing to re-enter information, saving time and avoiding errors. Invoices can be created individually or using mass invoicing, saving more time and to aid payment receipt, the invoices can be emailed directly to customers from within the system.

Request for Quotation

RFQs can be raised to send to multiple suppliers for materials, parts and subcontract activities. Responses can be recorded for future use and a purchase order can then be raised directly from the selected RFQ response.

Security & Access Control

Tricorn: Production requires each user to have a userID and password to access the system. Viewing and document creation/amendment rights are also held in the user database and can only be changed by the administrator of the system.

Tricorn: Dashboard

The dashboard provides a series of KPI charts for business measurement such as customer delivery performance, sales orders by month, machine utilisation and quote to sales order conversion. The delivery performance analytics chart can assist with achieving SC21 accreditation. In addition, task lists and alerts/ warnings can be shown on the user's dashboard.
